

# Grafilox Doctor Blades

Grafilox offers its customers a wide range of doctor blades made of steel, carbon steel, stainless steel and plastic, varying in thickness, in height and in tip configuration.

The importance of a good doctor blade is often underestimated. For all kinds of applications another kind doctor blade is recommended. Material and thickness, as well as tip configuration can improve the performance of your work. Grafilox happily informs you about the best option for your print machines.

## Bevel

Doctor blades with a bevelled edge have a fine and stable tip. This guarantees a clean wipe and less waste. Available in different types of bevel angles.

## Lamella

Lamella blades can be used for all kinds of printing. The tip has a reduced consistent thickness, which guarantees an increase in productivity and less waste.

## Straight

This flexographic print industry standard has a rounded tip, which allows a quick and safe wipe over the anilox roller.
